

- SILENT BACKGROUND AGENT

Track your laptops even when they're "off".

Recoversoft runs in the background using cellular data — continuously sending location even when the lid is closed and the user thinks the device is shut down.

24/7

LIVE TRACKING

LTENO WIFI
NEEDED**1-500+**DEVICES
SUPPORTED

Location Playback

Replay the exact route a device took — every stop, every movement — plotted on a map with timestamps.

Geo-fencing

Draw a safe zone on the map. Get an instant alert the moment a device crosses the boundary.

Battery Management

A smart overlay discourages shutdown when battery is critically low — keeping devices trackable for longer.

CORE FEATURES

Everything you need to stay in control

Recoversoft gives your IT team complete visibility over every tracked device — in real time and historically — without relying on user cooperation.

Location Playback

Replay the exact route a device took — every stop and movement plotted on a map with precise timestamps for full accountability.

Geo-fencing Alerts

Define safe zones on the map and receive instant notifications the moment any device crosses a boundary — day or night.

Battery Management

When battery is critically low, a smart overlay discourages shutdown — keeping the device alive and trackable for as long as possible.

Cellular-first Tracking

Operates over LTE/4G/5G — no reliance on WiFi. Tracking continues even when devices are taken off-premises or disconnected from corporate networks.

Silent Background Agent

Recoversoft is invisible to the end user. It runs at a system level, continuously reporting location without interrupting normal device operation.

Live Map Dashboard

A clean, central dashboard shows all your devices on a live map — so your team always knows where every asset is at a glance.

HOW IT WORKS

1-10

Small business or
startup

11-50

Growing teams

51-200

Mid-size organisations

200+

Enterprise &
education

Ready to protect your **devices**?

We'll walk you through setup
— whether you have 5 laptops
or 500. Our team handles the
full onboarding process so
you're tracking from day one.
